Photoluminescent Systems

2009 ICC Luminescent Egress Path Markings

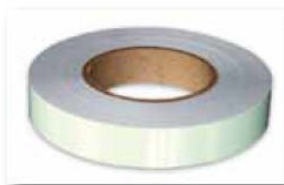

Path Markings Designed with Photoluminescent Material

Safety is the most important reason to install a photoluminescent directional system for evacuation during sudden blackout or smoke-laden conditions. The reliable Glo Brite® Safety Guidance System is a complete system of non-electric, photoluminescent safety components essential for comprehensive low-level emergency evacuation route.

The Glo Brite® components are **Non-Electric, Non-Toxic** and **Non-Radioactive**. Using the latest photoluminescent technology, the Glo Brite® pigment absorbs and stores normal ambient light in the event of a sudden power outage, the stored energy is **Immediately Visible**, enabling the Glo Brite® Safety Guidance System to provide a safe illuminated path through dark stairwells, hallways and rooms. The Glo Brite® Safety Guidance System is easy and low-cost to install, and because there are no bulbs to burn out, the system is **Virtually Maintenance-Free, Periodic Inspection for 25+ Years**.

Safety + Reliability + Energy Savings = The Glo Brite® Safety Guidance System

When it comes to peace of mind, it all adds up!
